15 Questions . Detailed Solutions with Shortcuts

SSC GD

Weekly Study Digest · May 25 – May 31, 2026

Topic Analysis

1. Topics Covered - General Knowledge, Mathematics, English, and Logical Reasoning
2. Difficulty Breakdown - 40% easy, 30% medium, 30% hard
3. Key Concepts - Basic math operations, general knowledge, and logical reasoning
4. Common Mistakes - Calculation errors, lack of general knowledge, and incorrect logical reasoning
5. Study Tips - Practice regularly, focus on weak areas, and stay updated with current events

& Quick Reference

6. Key Formulas & Shortcuts - Basic math formulas, series patterns, and grammar rules
7. **Weekly Strategy - Focus on mastering one topic per week, such as general knowledge or mathematics, and practice with sample questions * Review notes regularly * Practice with timed quizzes * Analyze mistakes and improve weak areas**

General Knowledge

1 Which of the following countries is the largest producer of milk?

- ☒ A. India
- ☐ B. United States
- ☐ C. China
- ☐ D. Brazil

Correct: A

Detailed Solution

To determine the largest producer of milk, we need to consider the global milk production statistics. According to the Food and Agriculture Organization (FAO) of the United Nations, India is the largest producer of milk, accounting for over 18% of the world's total milk production. The logical reasoning behind this is that India has a large population of dairy cattle, including cows and buffaloes, which are the primary sources of milk. A smart shortcut to solve this question is to recall the general knowledge that India is a major agricultural country and has a significant dairy industry. Common mistakes students make on this question include assuming that the United States or China, being larger economies, would be the largest milk producers. However, the correct answer is A. India, as it has consistently been the world's largest milk producer for several years. The final answer is A.

Reasoning

2

Which of the following is the next number in the series: 2, 4, 8, 16, ?

- ☒ A. 32
- ☐ B. 36
- ☐ C. 40
- ☐ D. 48

' Correct: A

Detailed Solution

The given series is 2, 4, 8, 16, ?, and we need to find the next number in the series. This is a classic example of a geometric progression (GP) series, where each term is obtained by multiplying the previous term by a fixed constant, in this case, 2. The step-by-step working for this series is as follows: $2 \times 2 = 4$, $4 \times 2 = 8$, $8 \times 2 = 16$, and $16 \times 2 = 32$. The logical reasoning behind this is that the series is following a consistent pattern of doubling the previous term. A smart shortcut to solve this question is to recognize the GP pattern and apply the formula for the n th term of a GP series. Common mistakes students make on this question include not recognizing the GP pattern or not applying the formula correctly. The final answer is A. 32.

General Knowledge

3

Who is the current President of India?

- ☒ A. Droupadi Murmu
- ☐ B. Ram Nath Kovind
- ☐ C. Pranab Mukherjee
- ☐ D. A.P.J. Abdul Kalam

' Correct: A

Detailed Solution

To find the current President of India, we need to consider the latest information available. As of the knowledge cutoff date, the President of India is Droupadi Murmu. The logical reasoning behind this is that the President of India is a constitutional position that is held by an individual for a fixed term, and Droupadi Murmu is the current incumbent. A smart shortcut to solve this question is to recall the recent news and updates about the Indian government and its leadership. Common mistakes students make on this question include not being aware of the current events or not updating their knowledge with the latest information. The final answer is A. Droupadi Murmu.

Mathematics

4 What is the value of x in the equation $2x + 5 = 11$?

- ☐ A. 2
☒ B. 3
☐ C. 4
☐ D. 5

' Correct: B

Detailed Solution

The given equation is $2x + 5 = 11$, and we need to solve for x . The step-by-step working for this equation is as follows: subtract 5 from both sides to get $2x = 11 - 5$, which simplifies to $2x = 6$. Then, divide both sides by 2 to get $x = 6/2$, which simplifies to $x = 3$. The logical reasoning behind this is that we need to isolate the variable x by applying inverse operations to both sides of the equation. A smart shortcut to solve this question is to recognize the linear equation pattern and apply the formula for solving linear equations. Common mistakes students make on this question include not applying the inverse operations correctly or not simplifying the equation properly. The final answer is B. 3.

Mathematics

5 A shopkeeper sells a product at a 10% profit. If the cost price is Rs. 100, what is the selling price?

- ☐ A. Rs. 90
☐ B. Rs. 100
☒ C. Rs. 110
☐ D. Rs. 120

' Correct: C

Detailed Solution

The given problem is that a shopkeeper sells a product at a 10% profit, and the cost price is Rs. 100. To find the selling price, we need to calculate the profit amount and add it to the cost price. The step-by-step working for this problem is as follows: calculate the profit amount by multiplying the cost price by the profit percentage, which is 10% of Rs. 100 = $0.1 \times 100 = \text{Rs. } 10$. Then, add the profit amount to the cost price to get the selling price, which is $\text{Rs. } 100 + \text{Rs. } 10 = \text{Rs. } 110$. The logical reasoning behind this is that the selling price is the sum of the cost price and the profit amount. A smart shortcut to solve this question is to recognize the profit percentage pattern and apply the formula for calculating the selling price. Common mistakes students make on this question include not calculating the profit amount correctly or not adding the profit amount to the cost price properly. The final answer is C. Rs. 110.

Mathematics

6

What is the value of x in the equation: $x/4 + 2 = 9$?

- ☐ A. 20
- ☒ B. 28
- ☐ C. 30
- ☐ D. 32

' Correct: B

Detailed Solution

The given equation is $x/4 + 2 = 9$, and we need to solve for x . The step-by-step working for this equation is as follows: subtract 2 from both sides to get $x/4 = 9 - 2$, which simplifies to $x/4 = 7$. Then, multiply both sides by 4 to get $x = 7 \times 4$, which simplifies to $x = 28$. The logical reasoning behind this is that we need to isolate the variable x by applying inverse operations to both sides of the equation. A smart shortcut to solve this question is to recognize the linear equation pattern and apply the formula for solving linear equations. Common mistakes students make on this question include not applying the inverse operations correctly or not simplifying the equation properly. The final answer is B. 28.

Reasoning

7

Which of the following words is the odd one out: Rose, Lily, Sunflower, Car?

- ☐ A. Rose
- ☐ B. Lily
- ☐ C. Sunflower
- ☒ D. Car

' Correct: D

Detailed Solution

The given words are Rose, Lily, Sunflower, and Car, and we need to find the odd one out. The logical reasoning behind this is that the first three words - Rose, Lily, and Sunflower - are all names of flowers, while the fourth word - Car - is a vehicle. A smart shortcut to solve this question is to recognize the pattern of the words and identify the one that does not fit the pattern. Common mistakes students make on this question include not recognizing the pattern or not identifying the odd one out correctly. The final answer is D. Car.

General Knowledge

8

Who is the author of the book 'The Discovery of India'?

- ☒ A. Jawaharlal Nehru
- ☐ B. Mahatma Gandhi
- ☐ C. Subhas Chandra Bose
- ☐ D. Bhagat Singh

' Correct: A

Detailed Solution

The given book is 'The Discovery of India', and we need to find its author. The logical reasoning behind this is that the book is a historical and cultural account of India, and its author is a well-known Indian leader and writer. A smart shortcut to solve this question is to recall the famous Indian authors and their works, and recognize that Jawaharlal Nehru is the author of 'The Discovery of India'. Common mistakes students make on this question include not being aware of the book or its author, or not recognizing the correct author. The final answer is A. Jawaharlal Nehru.

English

9

Which of the following sentences is grammatically correct?

- ☐ A. Me and my friend goes to the store
- ☒ B. My friend and I go to the store
- ☐ C. My friend and me go to the store
- ☐ D. I and my friend goes to the store

' Correct: B

Detailed Solution

The given sentences are Me and my friend goes to the store, My friend and I go to the store, My friend and me go to the store, and I and my friend goes to the store, and we need to find the grammatically correct sentence. The logical reasoning behind this is that the subject-verb agreement and the use of pronouns should be correct in a grammatically correct sentence. A smart shortcut to solve this question is to recognize the correct sentence structure and the use of pronouns, and identify the sentence that follows the rules of grammar. Common mistakes students make on this question include not recognizing the correct sentence structure or not using the pronouns correctly. The final answer is B. My friend and I go to the store.

Mathematics

10

A shopkeeper sells a product at a 10% profit. If the cost price is Rs. 200, what is the selling price?

- ☒ A. 220
☐ B. 210
☐ C. 230
☐ D. 240

' Correct: A

Detailed Solution

The given problem is that a shopkeeper sells a product at a 10% profit, and the cost price is Rs. 200. To find the selling price, we need to calculate the profit amount and add it to the cost price. The step-by-step working for this problem is as follows: calculate the profit amount by multiplying the cost price by the profit percentage, which is 10% of Rs. 200 = $0.1 \times 200 = \text{Rs. } 20$. Then, add the profit amount to the cost price to get the selling price, which is $\text{Rs. } 200 + \text{Rs. } 20 = \text{Rs. } 220$. The logical reasoning behind this is that the selling price is the sum of the cost price and the profit amount. A smart shortcut to solve this question is to recognize the profit percentage pattern and apply the formula for calculating the selling price. Common mistakes students make on this question include not calculating the profit amount correctly or not adding the profit amount to the cost price properly. The final answer is A. 220.

Reasoning

11

Which of the following is the next letter in the series: A, C, E, G, ?

- ☐ A. H
☒ B. I
☐ C. J
☐ D. K

' Correct: B

Detailed Solution

The given series is A, C, E, G, ?, and we need to find the next letter in the series. The logical reasoning behind this is that the series is following a pattern of alphabetical order, with each letter being two positions ahead of the previous letter. A smart shortcut to solve this question is to recognize the pattern of the series and apply the formula for the next letter. Common mistakes students make on this question include not recognizing the pattern or not applying the formula correctly. The step-by-step working for this series is as follows: $A + 2 = C$, $C + 2 = E$, $E + 2 = G$, and $G + 2 = I$. The final answer is B. I.

General Knowledge

12 What is the largest planet in our solar system?

- ☐ A. Earth
- ☐ B. Saturn
- ☒ C. Jupiter
- ☐ D. Uranus

' Correct: C

Detailed Solution

The given options are Earth, Saturn, Jupiter, and Uranus, and we need to find the largest planet in our solar system. The logical reasoning behind this is that the size of the planets in our solar system varies, and we need to identify the largest one. A smart shortcut to solve this question is to recall the general knowledge about the planets in our solar system and their relative sizes. Common mistakes students make on this question include not being aware of the relative sizes of the planets or not recognizing the largest planet. The final answer is C. Jupiter.

Reasoning

13 Which of the following is the next number in the series: 2, 6, 12, 20, 30?

- ☐ A. 40
- ☒ B. 42
- ☐ C. 44
- ☐ D. 46

' Correct: B

Detailed Solution

The given series is 2, 6, 12, 20, 30, ?, and we need to find the next number in the series. The logical reasoning behind this is that the series is following a pattern of increasing numbers, with each term being obtained by adding a certain number to the previous term. A smart shortcut to solve this question is to recognize the pattern of the series and apply the formula for the next number. Common mistakes students make on this question include not recognizing the pattern or not applying the formula correctly. The step-by-step working for this series is as follows: $2 + 4 = 6$, $6 + 6 = 12$, $12 + 8 = 20$, $20 + 10 = 30$, and $30 + 12 = 42$. The final answer is B. 42.

Reasoning

14 Which of the following is the odd one out: Mango, Apple, Banana, Guava

- ☐ A. Mango
- ☒ B. Apple
- ☐ C. Banana
- ☐ D. Guava

' Correct: B

Detailed Solution

The given options are Mango, Apple, Banana, and Guava, and we need to find the odd one out. The logical reasoning behind this is that the first three options - Mango, Banana, and Guava - are all tropical fruits that are commonly found in India, while the fourth option - Apple - is a fruit that is commonly found in temperate regions. A smart shortcut to solve this question is to recognize the pattern of the options and identify the one that does not fit the pattern. Common mistakes students make on this question include not recognizing the pattern or not identifying the odd one out correctly. The final answer is B. Apple.

General Knowledge

15 Which of the following rivers is known as the 'Ganga of the South'?

- ☒ A. Godavari
- ☐ B. Krishna
- ☐ C. Kaveri
- ☐ D. Tungabhadra

' Correct: A

Detailed Solution

The given options are Godavari, Krishna, Kaveri, and Tungabhadra, and we need to find the river that is known as the 'Ganga of the South'. The logical reasoning behind this is that the river that is known by this name is a major river in southern India and is considered sacred. A smart shortcut to solve this question is to recall the general knowledge about the rivers in India and their nicknames. Common mistakes students make on this question include not being aware of the nickname or not recognizing the correct river. The final answer is A. Godavari.

Study Tips

Maximize your preparation with these strategies:

[R] Review Thoroughly

Read each detailed solution carefully, even for questions you got right. The shortcuts and alternative methods will save you time on exam day.

[P] Practice Similar Problems

After reviewing, solve 2-3 similar problems on the same topic. Pattern recognition is the key to speed in competitive exams.

[S] Master the Shortcuts

The shortcuts in these solutions are battle-tested. Practice them until they become automatic. A 30-second shortcut can decide your rank.

[T] Track Accuracy & Speed

Note time per question. If a question takes more than 2 minutes, flag it. Review why it took long - was it the concept or the calculation?

[F] Focus on Weak Areas

Use the Topic Analysis to identify weak spots. Dedicate extra sessions to those topics before moving to new material.

[E] Simulate Exam Conditions

Take timed mock tests on vlymbooq. Real exam simulation reduces anxiety and builds the mental stamina needed for 2-3 hour papers.
